

STRUCINSPECT

STRUCINSPECT operates the world's first Infrastructure Lifecycle Hub for digital infrastructure inspection and lifecycle management. Founded in 2019 as a Joint Venture between PALFINGER, VCE Vienna Consulting Engineers ZT GmbH and ANGST Group, STRUCINSPECT provides services and expertise for digital inspection of essential infrastructure.

The online collaboration platform forms the core of the company and combines technologies and functions to maintain bridges, tunnels, and dams in a safe, sustainable, and resource-saving manner. It enables essential steps of digital infrastructure inspection to be performed directly on the platform, while serving as the central interface for documenting and structuring data. By giving all stakeholders access to the same database, STRUCINSPECT creates maximum transparency and efficiency.

STRUCINSPECT supports their customers in transforming their existing infrastructure inspection and management into a fully digitalized process. For this purpose, STRUCINSPECT offers individually configurable business solutions with the variable components software solution - Infrastructure Lifecycle Hub, consulting in digital transformation and expert knowledge in the field of infrastructure inspection.

Currently, STRUCINSPECT has 23 employees and is represented in Klagenfurt, Germany, and the USA in addition to its headquarters in Vienna.
